

Mayfly- Olive

Find their 3 tails and note their darting swimming behaviour

Cased caddis fly

These larvae make a home from tiny stones, twigs or leaves. Wait and see their head pop out

leech

Look out for their interesting movement. These will not suck your blood! They feed on detritus or invertebrates

bloodworm

These live in any kind of water habitat

Chalk Stream water invertebrates

True Mayfly

Impressive creatures that only live in clean water. Look for their 3 tails and feathery gills. Find out about their lifecycle.

freshwater shrimp

often abundant in chalk streams but an indicator of clean water.

Caseless caddis fly

note their squirming swimming and the hooks at the end of the tail

Ramshorn snail

A flat small snail

damselfly nymph

A large invertebrate which will turn into the beautiful blue flying damselflies
